THEORY OF HIGH ELASTICITY OF RUBBER. [1950]

11p. 21 refs.

Order from SLA ml\$2.40, ph\$3.30

60-18435

Trans. of [Vysokomolekulyarnyye Soyedineniya] (USSR)
1959, v. 1, no. 1, p. 1056-1062.

A comparison of the usual network theory of high elasticity with experience indicates the existence of additional forces hindering extension which are less strongly dependent on deformation than the force calculated by the network theory. A change of energy of the intermolecular interaction on extension can help the deformation and leads to the occurrence of an energy force depending more strongly on deformation than the force predicted by the network theory. The additional force has not an energy but an entropy origin and evidently is conditioned by the decrease of the number of configurations of the system of chains on (Materials--Rubber, TT, v. 5, no. 3) (over)
